Understanding this Report

Foreword

The Pennsylvania Health Care Cost Containment Council (PHC4) was established as an independent state agency by the General Assembly and Governor of the Commonwealth of Pennsylvania in 1986. To help improve the quality and restrain the cost of health care, PHC4 promotes health care competition through the collection, analysis and public dissemination of uniform cost and quality-related information. Thanks to the vision of its General Assembly, Pennsylvania has begun to build a new health care marketplace where purchasers, consumers, providers, payors, and policy makers can make more informed decisions about the delivery of health care. This *Hospital Performance Report* is one of a series of public reports designed to achieve this goal, and is based on a previous PHC4 report, the *Hospital Effectiveness Report*, published from 1989 through 1994. Information about additional treatment and surgical categories is posted on the PHC4 Web site at www.phc4.org.

What is the purpose of the report?

Before we make a major purchase, we normally familiarize ourselves with as much information as we can gather about the available products or services. By comparing what we can learn about the quality of the product as well as what will be charged for it, we decide on what we believe is the best quality product for the best possible price. So it should be with health care services. Unfortunately, the information available to consumers and purchasers to make such decisions is limited and often not widely accessible. PHC4's *Hospital Performance Report* can help to fill that vacuum of information and assist consumers and purchasers in making more informed health care decisions. This report can also serve as an aid to providers in pinpointing additional opportunities for quality improvement and cost containment. It should not be used in emergency situations.

Information about additional treatment and surgical categories is posted on the PHC4 Web site at www.phc4.org.

What is included in this report?

- This report, which covers inpatient hospital discharges during 2000, is divided into three regional versions. The information reported is hospital-specific.
- This report encompasses 22 selected Diagnosis Related Groups (DRGs). These DRGs have been chosen due to a combination of factors, including a high degree of variation in mortality, high volume, significant resource consumption, and diversity across diagnoses and procedures. Descriptions of the DRGs are on pages 8 and 9.
- All Pennsylvania general and most specialty acute care hospitals, regardless of bed size, are included. The number of cases, a risk-adjusted mortality rating, a risk-adjusted average length of hospital stay, a risk-adjusted readmission rate (for most DRGs) and the average hospital charge for each of the included DRGs form the basis of the report.

What is a DRG?

A Diagnosis Related Group (DRG) is an illness classification system adopted and modified by the federal government for standard health care reporting and billing purposes by hospitals and insurance companies. The system groups similar medical conditions and surgical procedures into hundreds of illness categories, called DRGs, based on the patients' diagnoses and procedures.

Where does the data come from?

Pennsylvania hospitals are required by law to submit certain information to PHC4. The 2000 data compiled for the purpose of this publication is reported as it was submitted to PHC4 by Pennsylvania hospitals. The data was subject to standard verification processes by PHC4. In addition, hospitals are required to submit data indicating in simple terms "how sick the patient was" or, in technical jargon, a "severity score." The data are then risk-adjusted.

What does “risk-adjusted” mean?

The hospitals use a sophisticated patient risk classification system, called Atlas Outcomes®, to abstract severity scores based on patient medical records, assign patients to an appropriate illness category and submit the data to PHC4. These categories, measured from the point of admission to the hospital, range from a patient who is not very sick to a patient who is near death. These severity scores allow PHC4 to adjust for patients at greater risk of dying or staying in the hospital for a longer period of time than other patients. The Atlas Outcomes® system was developed by MediQual Systems, Inc., now owned by Cardinal Health Information Companies, and is based on the examination of numerous Key Clinical Findings such as lab tests, EKG readings, vital signs, patient’s medical history, imaging results, pathology, age, sex, and operative/endoscopy findings. PHC4 also independently adjusts for the presence of cancer in the patient population included in this report.

What is measured in the report and why is it important?

PHC4’s mission is to provide the public with information that will help to improve the quality of health care services while also providing opportunities to restrain costs. The measurement of quality in health care is not an exact science and is still in its beginning stages. And while there may be a number of ways to define quality, for the purposes of this report, four factors are suggested:

- *Volume of Cases* – For each hospital, the number of cases in each DRG after exclusions is reported. This can give a patient or a purchaser an idea of the experience each facility has in treating such patients. Studies have suggested that in at least some areas, the number of cases treated by a physician or hospital can be a factor in the success of the treatment.

Note: Small or specialty hospitals may report low volume due to the unique patient population they serve or geographic location.

- *Risk-Adjusted Mortality Rates* – PHC4 has used risk-adjusted mortality statistics as a measure of quality since it began publishing reports in 1989. Using a complex mathematical formula that assesses the degree of illness for patients upon their admission to the hospital, PHC4 calculates an expected, or predicted, number of deaths. In simple terms, based upon how sick the patients are, PHC4’s method determines the number of patients one could reasonably expect to die in a given hospital in a given DRG. Hospitals that treat sicker patients are given “credit” in the system; more patients can be expected to die because they are more seriously ill.
- *Risk-Adjusted Average Length of Stay (ALOS)* – This measure represents a step forward in the measurement of the quality of care. How long a patient stays in the hospital can reflect how successful the treatment is that the hospital provides, and has an impact on the resources brought to bear in delivering treatment. In much the same way as the mortality measure, key patient risk factors related to

how sick patients are when admitted to the hospital are taken into account. These patient risk factors are then adjusted or accounted for so that, for example, a younger, healthier patient is not treated the same statistically as an older, sicker one. These adjustments allow for an apples to apples comparison - patient severity or risk factors cannot explain the remaining differences. Yet after patient risk factors have been equalized among hospitals in the same treatment categories, there are still differences in the length of hospitalization.

- *Risk-Adjusted Readmissions, by Percent* – A subsequent acute care hospitalization in any Pennsylvania hospital where the admit date is within 30 days of the discharge date of the original hospitalization. Same day readmission is analyzed if the original hospitalization resulted in a discharge to home for self-care, home health care, or home IV care. Like the mortality and length of stay measures, patient risk factors and the severity of illness on admission are taken into account statistically. Readmission rates are important from both a quality of care

and cost standpoint. While some rehospitalizations will always occur, high quality care may lessen the need for subsequent hospitalizations.

Other Data Issues

- *Lung Cancer* – Lung cancer is a terminal illness where death is often the expected outcome; therefore mortality and readmission rates are not meaningful measures of the quality of care and are not reported.
- *Do Not Resuscitate Cases* - The mortality analysis includes Do Not Resuscitate (DNR) cases.
- *Heart Attack - Medical Management and Transfers to Other Acute Care Facilities* – Heart attack patients that are treated medically are frequently transferred for further diagnosis and treatment to advanced cardiac care facilities. For this reason, the percentages of cases transferred to another facility are also included, while readmission rates are not. Patients transferred out of facilities with advanced cardiac care are often returned to their original hospital.

- *Heart Attack with PTCA/Stent* - Readmission rates are not reported.
- *DRGs Containing Miscellaneous or Cancer-Related Cases* - Determining a readmission rate for DRGs that contain a substantial number of cancer-related cases is difficult since patients typically return to the hospital for additional care; the readmission could be attributed to the fact that the patient had cancer. For this reason, readmission rates are not reported for DRGs with a high number of cancer-related cases (78 - Blood Clot in Lung; 130 - Vascular Disorders except Heart, complicated; 148 - Major Intestinal Procedures, complicated; 154 - Stomach and Small Intestinal Operations, complicated; and 416 - Septicemia). In addition, readmission rates are not reported for DRGs that are comprised of miscellaneous cases (188 - Stomach and Intestinal Complications and Disorders and 478 - Vascular Operations except heart, complicated).

Note: The risk-adjusted mortality, risk-adjusted length of stay and risk-adjusted readmission figures in this report are

important measures of quality and resource utilization, but cannot be considered the only measures. The measurement of quality is highly complex, and the information used to capture such measures is limited. A hospital death is frequently an unavoidable consequence of a patient's medical condition. Hospitals and physicians may do everything right and the patient can still die. However, after taking into account the significant risk factors available to PHC4, there are differences in patient outcomes among hospitals.

Hospital Charges

This report also includes the average hospital charge for each of the 22 medical and surgical treatment categories. While charges are what the hospital reports on the billing form, they may not accurately represent the amount a hospital receives in payment for the services it delivers. Hospitals usually receive less in actual payments than the listed charge. Charges do represent a benchmark since negotiations between hospitals and insurers regarding payment generally begin with the charge figure. Hospital

charges are used almost universally by those attempting to assess the costs of health care. Until a better method is developed, hospital charges represent a consistent, while imperfect, way to discuss the relative costs of health care.

A look at the financial data submitted by hospitals to PHC4 can shed some light on the relationship between the amount hospitals charge or bill for services, and the amount they receive in Net Patient Revenue (NPR). According to PHC4's *Hospital Financial Analysis 2000*, Pennsylvania hospitals received, on average statewide, \$.39 in NPR for every dollar that they charged in Fiscal Year 2000 (7/1/99 through 6/30/00).

Within the geographic area covered in this report, hospitals within Southwestern Pennsylvania received, on average, \$.39 in NPR for every dollar charged, Northwest Pennsylvania hospitals received an average of \$.49 on the dollar, and hospitals in the Southern Allegheny regions (Somerset, Johnstown, Altoona areas) received an average of \$.44 on the dollar.

It is important to note that the regional figures provided above are aggregate only and

Mortality Rate

Understanding the Symbols

- Significantly lower than the expected rate.
- ◉ Not significantly different than the expected rate.
- Significantly higher than the expected rate.

cannot be applied to individual hospitals or individual average DRG charges to calculate actual payment figures. This is due to substantial variation in hospital charges from hospital to hospital and from insurance product line to product line. There is also substantial variation in actual payments that hospitals receive for specific services. Actual payments to hospitals are imposed by Medicare and Medicaid, or result from negotiations with insurance companies, other third-party payors, and even individual patients.

Understanding the tables

Risk-Adjusted Mortality Rating - Symbols representing risk-adjusted mortality ratings are displayed in the report. These symbols reflect a comparison of a hospital's actual mortality rate and its expected mortality rate. A circle ○ means that the hospital's actual mortality rate was significantly lower, statistically speaking, than the rate expected or predicted by PHC4's mathematical formula. A circle with a dot ◉ inside means that the difference between the two figures was insignificant - the hospital performed as expected. A dark circle ● means that the

actual mortality rate was significantly higher, statistically, than the expected rate. Numbers related to these ratings are available upon request from the PHC4 office.

Risk-Adjusted Average Length of Stay - The risk-adjusted average length of stay reflects the number of days spent in the hospital by patients that completed a full course of treatment. These data are adjusted to take important health risk factors into account.

Number of Cases - The number of cases represents separate hospital admissions, not individual patients. A patient readmitted several times would be included each time in the number of cases. Hospitals that had fewer than five cases evaluated for risk-adjusted mortality were not rated; such low volume cannot be considered meaningful and, as such, the outcome data are excluded. *Not Reported* (NR) appears in the table next to these hospitals.

Hospital Names - The hospital names have been shortened in many cases for formatting purposes. Hospital names may be different today than in 2000 due to mergers and name changes. A list of changes is included on page 32.

How to use the report

- **Patients/Consumers** can use this report as an aid in making decisions about where to seek treatment for the categories detailed in this report. As with any health care decision, PHC4 urges the reader to use this report in conjunction with a physician or other health care provider when making a health care decision.
- **Group Benefits Purchasers/Insurers** can use this report as part of a process in determining where employees, subscribers, members, or participants should go for their health care.
- **Health Care Providers** can use this report as an aid in identifying opportunities for quality improvement and cost containment.
- **Policy Makers/Public Officials** can use this report to enhance their understanding of health care issues, to ask provocative questions, to raise public awareness of important issues and to help constituents identify quality health care options.
- **All of the previously mentioned groups** can use this information to raise impor-

tant questions about why differences exist in the quality and efficiency of care.

This report can be used as a tool. It should not be used to generalize about the overall quality of care at a hospital, but instead to examine hospital performance in specific treatment categories. This report does point out differences. The statistical methods used eliminate many of the clinical and medical differences among the patients in different hospitals, thereby allowing us to explore the real differences in mortality, readmission rate and the length of hospitalization among hospitals. The pursuit of these issues can play an important and constructive role in raising the quality while restraining the cost of health care in the Commonwealth of Pennsylvania.

Hospitals with Special Data Issues

Thirty-day readmission rates could not be calculated for Brownsville Hospital because of missing 1st quarter 2001 data. NC (for non-compliant) appears in the tables in the readmission rate column for this hospital.

Non-Compliant Hospitals

Hospitals are required under Pennsylvania law (Act 89) to submit timely, accurate health

care data to PHC4. PHC4, acting upon the advice of its Technical Advisory Group, a panel of physicians and other health care experts, has determined that hospitals missing the required UB 92 data or patient severity scores in excess of or equal to 15% overall are non-compliant with state law and are excluded from this report. These hospitals are listed below. Hospitals that were non-compliant in 2000 but are currently compliant are so noted. Although data specific to non-compliant hospitals is not included in this report, their records have been included in the overall research for in-hospital mortality, length of stay, readmission rate and charges and, as such, are reflected in the statewide and regional totals.

Hospitals Excluded from this Report Due to Non-Compliance

- Metro Health Center *
- Monsour Medical Center *
- Suburban General Hospital/Pittsburgh

** Now compliant effective for the first quarter 2001 data reporting period. PHC4 wishes to acknowledge the hard work performed by the overwhelming majority of Pennsylvania hospitals in meeting the requirements of Act 89.*

Diagnosis Related Group (DRG) Descriptions

Heart Attack- Medical Management (DRGs 121, 122, 123): A heart attack occurs when there is a sudden decrease in the blood supply to an area of heart muscle. Included are heart attack patients who were treated without surgical interventions.

Heart Attack with PTCA/Stent (subset of DRGs 112 and 116): Treatment of a heart attack using an inflated balloon to widen the blocked heart artery and increase blood flow to the heart (called percutaneous transluminal coronary angioplasty or PTCA). A metallic mesh tube called a stent may also be inserted in the blocked artery to open it more widely and decrease the chances that it will become narrowed again. Does not include coronary artery bypass graft surgery.

Heart Failure and Shock (DRG 127): Congestive heart failure is an abnormal accumulation of fluid due to the heart's inability to pump a normal amount of blood. The term "shock" refers to heart shock, not shock resulting from injury.

Abnormal Heartbeat, complicated (DRG 138): Abnormal heart rate or rhythm including tachycardia, bradycardia, fibrillation, flutter and heart block. Does not include heart attack, congenital heart defects or heart valve disorders.

Vascular Disorders except heart, complicated (DRG 130): Medical treatment for disorders of blood vessels in the head, neck, aorta, upper and lower limbs. Examples include varicose veins, aneurysm, and diabetes-related circulatory disorders. Conditions not included are hypertension and coronary artery disease.

Vascular Operations except heart, complicated (DRG 478): Surgical procedures on blood vessels in the head, neck, and the upper and lower limbs.

Stroke (Brain Attack) (DRG 014): Sudden "attack" caused by an abrupt decrease in the blood supply to part of the brain. Transient ischemic attack (temporary stroke symptoms) is not included.

Blood Clot in Lung (DRG 078): Blockage in the lung usually due to a blood clot. May also be caused by fat or an air bubble.

Lung Infections, complicated (DRG 079): Infections other than simple pneumonia including tuberculosis, pneumonitis and certain rare pneumonias.

Pneumonia, complicated (DRG 089): Simple pneumonia (inflammation of the lung) includes viral and bacterial pneumonia, as well as pleurisy, an inflammation of the membrane surrounding the lungs.

Chronic Obstructive Pulmonary Disease (COPD) (DRG 088):

Chronic lung disease where breathing is difficult due to airway narrowing, excess mucus production or inflammation. It is caused most frequently by bronchitis, asthma or emphysema.

Lung Cancer (DRG 082): Includes the initial diagnosis, as well as follow-up care, for patients with cancerous and non-cancerous tumors. Does not include chemotherapy.

Diabetes (DRG 294): Includes patients over age 35 hospitalized for control of the blood sugar. Conditions include coma, ketoacidosis and fluid imbalances. Kidney, eye, nervous system or circulatory complications related to diabetes are not included.

Kidney and Urinary Tract Infections, complicated (DRG 320): Acute and chronic infections of the kidney and urinary tract. Does not include urinary stones or urinary symptoms such as frequency, bleeding or pain.

Kidney Failure (DRG 316): Short and long-term kidney (renal) failure due to hypertension, heart disease, or unknown causes. Does not include dialysis or transplants.

Stomach and Intestinal Bleeding, complicated (DRG 174): Bleeding from stomach or intestinal ulcers, inflammation of the stomach, or inflammation of small sac-like areas in the wall of the colon.

Stomach and Intestinal Complications and Disorders (DRG 188):

Digestive system complications including liver failure and intestinal blockage resulting from a prior procedure. Also includes hemorrhoids, non-cancerous tumors and decreased blood supply to the intestine.

Stomach and Small Intestinal Operations, complicated (DRG 154):

Surgical procedures on the esophagus, stomach and small intestine. Does not include removal of appendix.

Major Intestinal Procedures, complicated (DRG 148):

Major surgical procedures involving the intestines, including colostomy and other repairs to the intestines. Not included are procedures for hernia, appendix or biopsies.

Hip Operations, except replacement, complicated (DRG 210):

Includes surgery for hip fracture. Does not include replacements or amputations.

Septicemia (DRG 416):

Also known as blood poisoning, is a system-wide infection of the patient's blood. Does not include post-operative or post-injury infections.

Poisoning and Toxic Effects of Drugs, complicated (DRG 449):

Toxic effects of overdose, wrong substance given or substance taken in error. Medications, non-medicinal substances and drugs such as ethyl alcohol, heroin and pesticides, gases such as carbon monoxide and metals are included. Does not include drug abuse or dependency.
